

RETROFIT BIDET CLINICAL TRIAL

What is this research about?

Bidets offer back dignity to those that struggle with only toilet paper. This clinical trial presents an opportunity for patients to be given a new intervention that may be better for patient's current toileting condition or that has fewer side effects than what they are receiving now.

This opportunity will also present better working conditions for Carers and Nursing staff.

InteliCorp are conducting a feasibility study on the use of bidets.

SURVEY FOR CARER OF PATIENTS & BIDET USERS

Ensure you have signed the Informed Consent Form.

These questions may be completed multiple times by the Carer for one or many uses of a bidet during the BIDET Trial.

No names or contact details are recorded. The only opt in personal information is Age Range, Gender, State. Data will be stored in a secure password protected server and only the facilitators of the study will have access to data.
